

Securing the world's critical Infrastructure

Driven by Purpose.
Backed by Experience.
Focused on People.

The Cutting Edge
of
OT Cybersecurity

Arista Cyber: Industrial Cybersecurity, Redefined.

In an era where ransomware can halt industrial assets and a vulnerability can disrupt an entire supply chain, trust and resilience are not optional – they are existential.

At **Arista Cyber**, we secure the unseen lifelines of modern civilization: **Operational Technology (OT)** and **Industrial Control Systems (ICS)**.

Our Mission

To safeguard critical infrastructure (CIs) assets by embedding cyber resilience at the core of industrial operations.

We do this by combining **human-centric strategy**, **world-class technical expertise**, and a relentless commitment to **simplicity and safety**.

How We're Different

Securing operations from the inside out.

Assessment-First, Always

We don't jump to tools. We start with **deep diagnostics** – IEC 62443, NIST CSF, and NERC CIP-based assessments to map your risks, not just your assets.

Designed for Real Plants, Not Just PowerPoints

We work on the ground – inside **refineries, water treatment plants, mining sites, and utilities** – delivering solutions that work **with operators**, not just for CISOs.

People-First Cybersecurity

Our training, awareness, and collaborative execution approach empower your **engineers, OT personnel, and executives** to become part of the solution.

Built to Scale. Designed to Fit.

From boutique sites to global portfolios, our solutions flex across geographies (North America, GCC, Europe) with a **local touch and global standards**.

The Arista Cybershield

A fully customizable bundle of proactive and reactive OT cyber services that adapts to your risk, asset lifecycle, and regulatory load.

What we deliver

Whether you're a refinery, power utility, a, or mining operation, Arista has you covered.

1. Assessment & Analysis

- Complete Asset Inventory & Visibility
- OT Vulnerability and Risk Assessments
- Maturity & Compliance Gap Reviews
- ICS Network Architecture Reviews
- Cyber PHA / HAZOP Support

2. Secure Design & Deployment

- Defense-in-Depth Architecture
- Remote Access with Zero Trust
- System Hardening & Commissioning
- Secure Deployment and Commissioning

3. Operate & Improve

- Real-time Threat Monitoring & Detection
- Incident Response & Disaster Recovery
- Patch, Backup & Recovery Automation
- Policy, Audit & OT Penetration Testing

4. Training & Transformation

- Certified OT Cyber Awareness (TÜV Rheinland / ISA/IEC 62443)
- Hands-on ICS Security Labs
- Cross-functional OT/IT training
- Role-based modules for operators, engineers, and executives

Our employees speak

**‘Lorem ipsum dolor sit amet
re est autem. Itas denimi, nos
acceptat a il imus, quae voles
ut es pore volor a velique eum
explatqui aut fugia’**

Employee, Arista Cyber

We're not just advisors. We're partners in resilience.

At Arista Cyber, we don't send consultants.

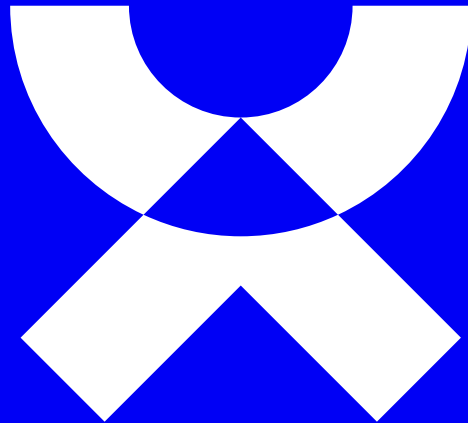

We build embedded security teams who grow with your organization, speak your operational language, and don't stop at advice — we implement.

We challenge
convention,
not your
operations.

Ready to fortify your facility?

Whether you manage a national grid or a wastewater station, let's talk about how Arista Cyber can protect your process, reputation, and future.
