ASSESSMENT & ANALYSIS OT ASSET INVENTORY & VISIBILITY

YOU CAN'T PROTECT WHAT YOU CAN'T SEE

In today's industrial environments, hidden or undocumented OT/ICS assets, outdated components, and unmanaged third-party connections create blind spots that attackers exploit. Without full visibility, it is impossible to measure risk or build effective defenses. Arista Cyber's comprehensive asset inventory helps you gain the visibility and accountability you need to stay secure, resilient, and compliant.

Our experts use non-intrusive discovery methods to map out every asset, system, and connection in your industrial environment. We analyze both physical and logical architectures, identify anomalies, and prioritize assets based on operational criticality. By aligning with frameworks such as ISA/IEC 62443, NERC CIP, NIST CSF and other Industry Standards, we ensure your asset inventory is not just complete, but compliance-ready.

With Arista Cyber, your first step to resilience begins with clarity. We turn unknown assets into trusted insights, building the foundation for secure, compliant, and future-ready operations.

KEY BENEFITS

- Full visibility into your OT/ICS environment.
- Compliance readiness with industry standards and regulations.
- Actionable insights to eliminate blind spots and strengthen defenses.
- Improved resilience with a living inventory that evolves as your systems change.

DELIVERABLES

- A consolidated list of OT and industrial devices across networks and sites.
- Identification of obsolete & vulnerable assets that increase exposure.
- Recommended actions mapped to industry frameworks (IEC 62443, NIST, NERC CIP, Industry Standard).
- Documentation to support compliance with industrial cybersecurity requirements.
- Executive Reporting: Clear dashboards and summaries designed for both technical and leadership teams.
